DETAILED ACTION

Oath/Declaration

1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

Inventor's signature is missing.

Note the petition on January 18, 2002 had been dismissed. See paper number 5 mail on April 19, 2002

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 18-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 18-19 are rejected as being hybrid claims for claims both statutory classes, namely an apparatus and a method. The claims are ambiguous and fail to particularly point out the claimed invention. See Ex parte Lyell, 17 USPQ2d 1548 (Bd. PA&I 1990).

Claims 18-19 have not been further treated on the merits.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-11 and 24-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vayanos et al [6,134,483] in view of Abraham et al [5,731,786].

Vayanos et al discloses a method and apparatus for efficient GPS assistance in a communication system. According to Vayanos et al a position correction factor is determined and transmitted for each of a plurality of physical objects. According further to Vayanos et al, each of the physical object has an identifier (ID) to identify the particular physical object, wherein the correction factor is transmitted based on the identifier. See figures 3A-3C and, in particular, columns 3-5. While Vayanos et al discloses the identifiers, the correction factors, Vayanos et al does not particularly teaches transmitting the correction factor in any particular or given order. Abraham et al, on the other hand, discloses a compaction of SATPS information for subsequent signal processing, wherein there is provided a plurality of physical objects (such as, space vehicles). Each of the physical objects has a correction factor associated therewith and the correction factor is transmitted based on a particular order, which can be predetermined future time, increasing time value, etc. See, in particular, columns 4-6. Thus, it would have been obvious to one skilled in the art at the time of the invention to be motivated to modify the system of Vayanos et al by incorporating the features from

the compaction system of Abraham et al because such modification, as suggested by Abraham et al in column 22, would improve the accuracy of the system.

Allowable Subject Matter

6. Claims 20-21 and 22-23 are allowed.
7. Claims 12-17 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
